Replacement Tree No. 01 - African Sumac

Tree Characteristics

On approved OCFA Fuel Mod Plant List

Spreading or Weeping with a Low Canopy.

Rounded or Spreading Shape.

Has Evergreen foliage.

Height: 20 - 30 feet.

Width: 20 - 35 feet.

African Sumac is a dense shade tree, rather graceful with its arching branches and weeping foliage. It is very effective as a screen (as seen in the picture above) or windbreak, and as an evergreen specimen. It is tough and reliable in dry conditions, though it looks best with regular deep watering. It may require regularly scheduled light top-trimming (but not necessarily shearing) of vigorous top shoots to maintain its height below 25'.

DRAFT

Replacement Tree No. 02 - Arbutus Marina

Tree Characteristics

On approved OCFA Fuel Mod Plant List

Slow Growing, Spreading Low Canopy.

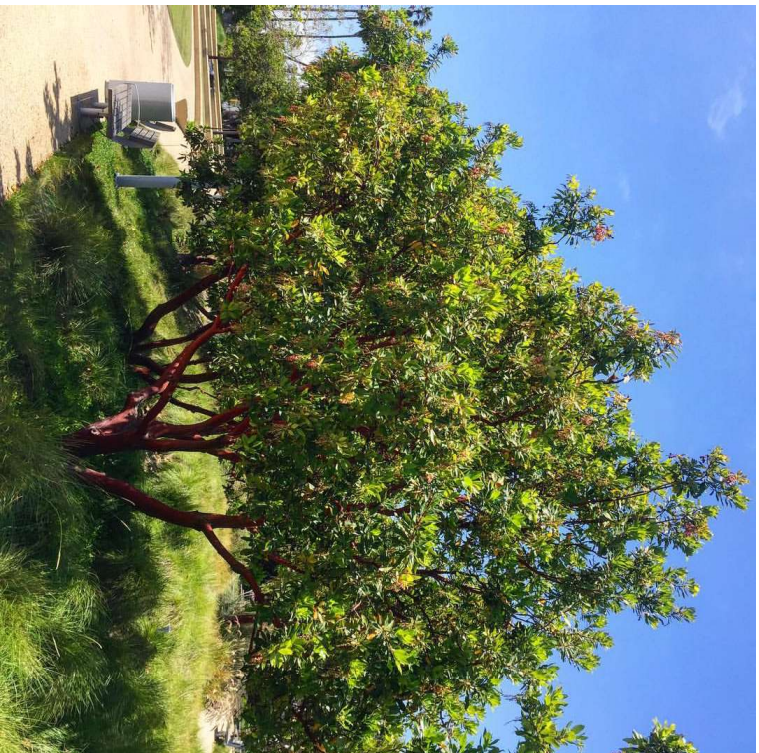

Shape: Rounded or Vase.

Has Evergreen foliage.

Height: 40 Ft.*

Width: 30 Ft.*

* Tree can easily be keep as small tree or large shrub.

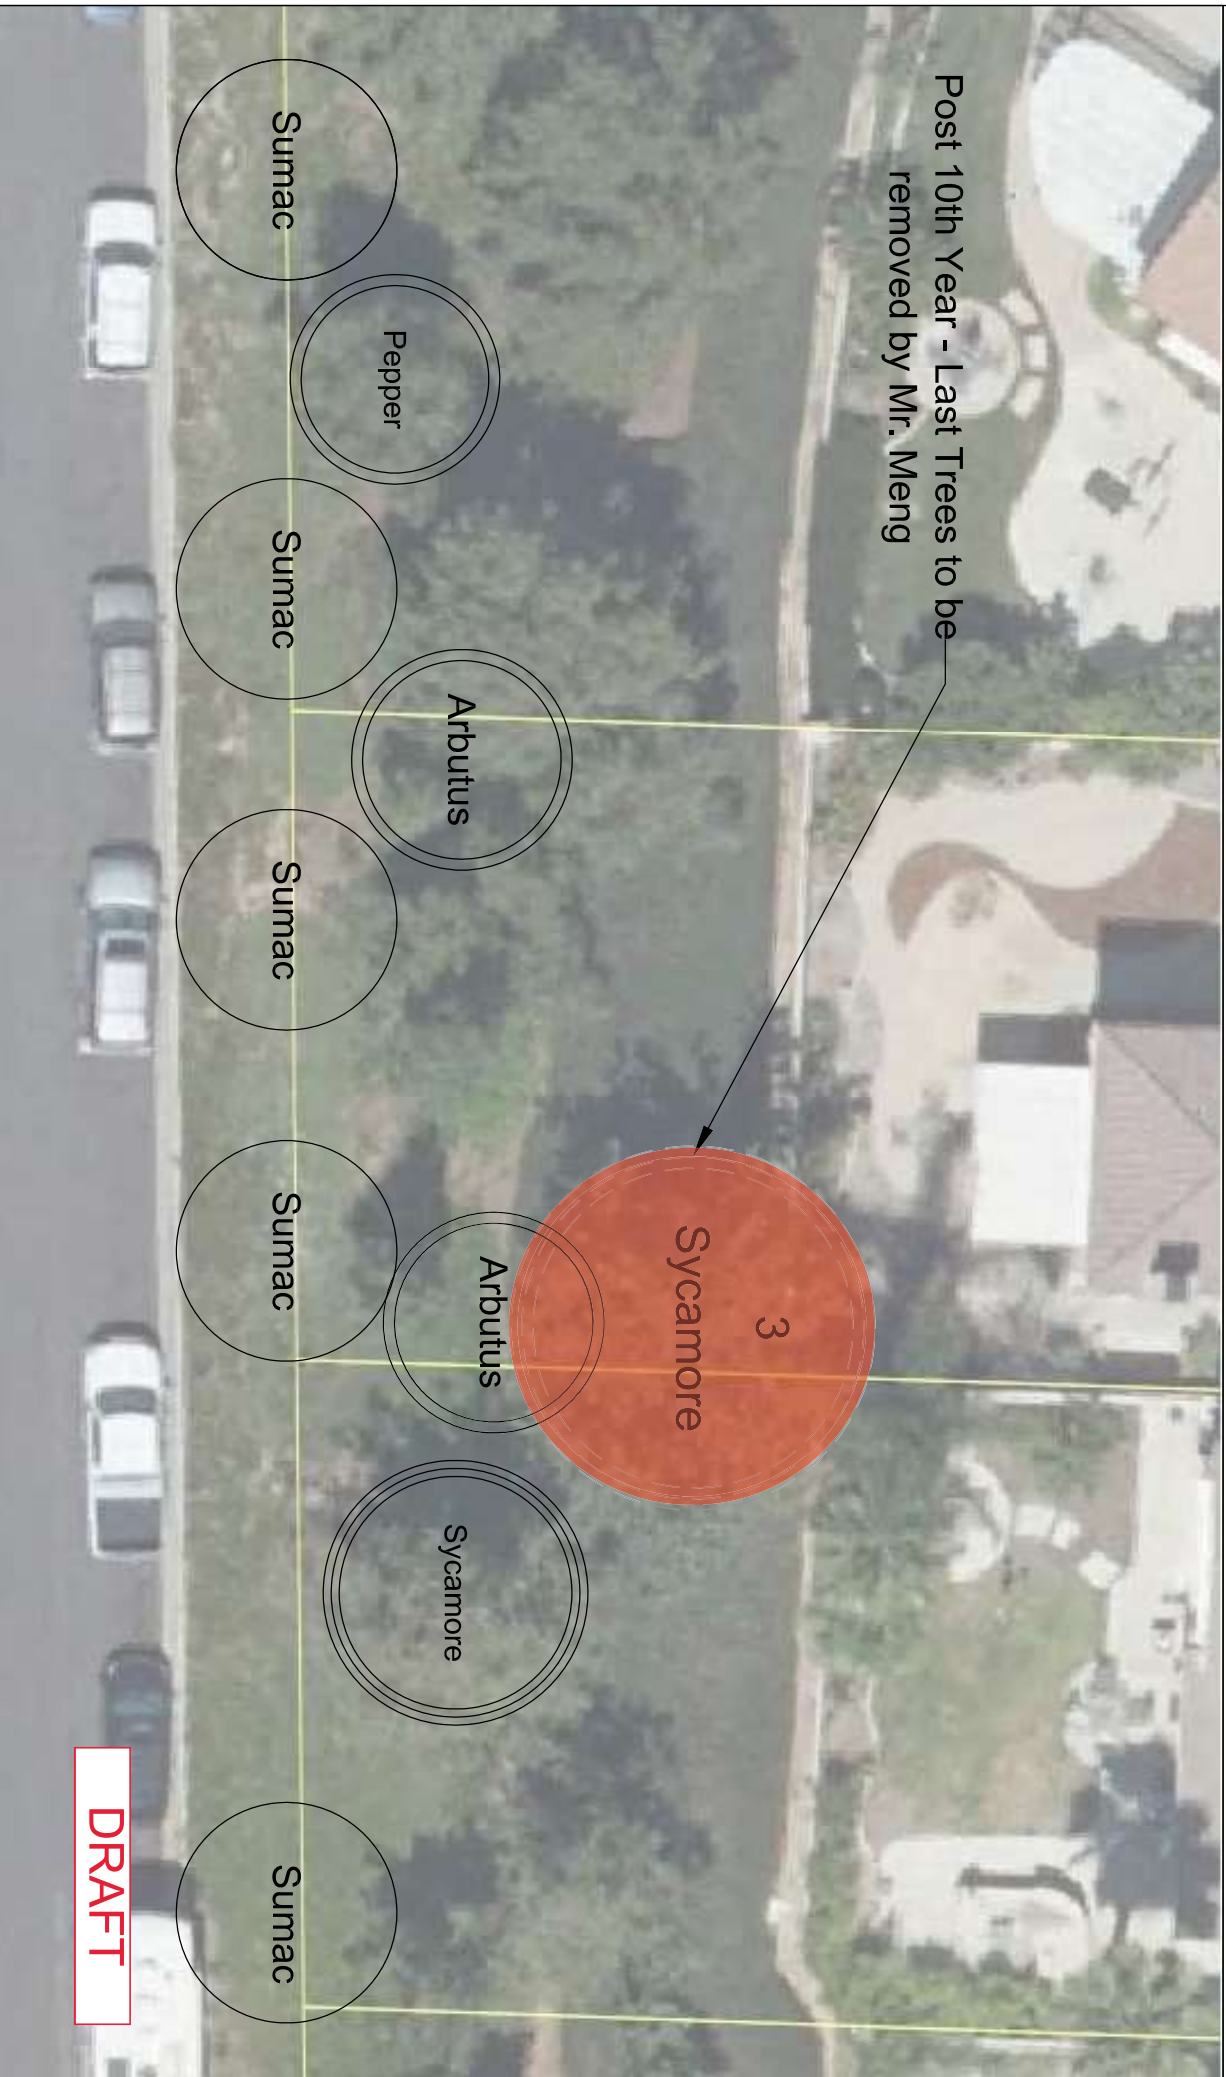

Arbutus 'Marina' is a stunning evergreen tree. This hybrid is coveted for its moderate size (30 feet tall and equally wide) and its dependable performance in any number of climates and conditions. Arbutus requires full sun and occasional water, once established. Its growing pace is moderate to slow, allowing ample time for shaping over the years to achieve exactly the right structure. Attractive large dark green leaves are a handsome red when new. In the fall and winter, pretty urn-shaped pink flowers clusters that resemble elaborate dangling earrings appear at the same time as the strawberry-like red to yellow fruit. The peeling red bark is a rich textural and colorful design element in the garden.
