Good evening, Mayor and City Council. Peter Meng, Licensed Professional Engineer and fee simple property owner. I am speaking directly to Item A, the City Manager's Performance Evaluation.

A City Manager's duty is to protect public safety and shield taxpayers from catastrophic liability. Under this City Manager's oversight, severe engineering negligence and contract legal bullying have been allowed to fester, resulting in an imminent public safety crisis along the Chicago Avenue corridor.

First, the City Manager failed to oversee the City Engineer and municipal contractor, Willdan. Both ignored a stamped Professional Engineer's safety report detailing a Wildland-Urban Interface fire hazard over a high-pressure natural gas pipeline, allowing an administrative default to lapse on October 14th and locking this City into strict liability under Government Code Section 835.

Second, rather than correcting staff, the City Manager permitted Contract City Attorney Todd Litfin to weaponize a limited surface easement—falsely claiming the City owns private land fixtures, mischaracterizing property access as 'encroachment,' and chilling my First Amendment speech during public council sessions. Despite formal reporting, this administration took zero corrective action, ratifying a contract attorney's written threats against a resident securing critical infrastructure.

Third, this Council cannot claim ignorance. You were explicitly warned of these technical safety risks, yet actively voted to approve the LMAD budget over resident protests—affirmatively funding the continuation of this hazardous condition.

Because of this administrative cover-up, Yorba Linda is now under federal scrutiny. SEC Whistleblower Complaint TCR #17938-882-352-834 is active, with California Resources Corporation executives, the CPUC, and PHMSA formally alerted to this City's obstruction.

I demand this Council cure its prior budget votes tonight by making it a mandatory condition of the City Manager's evaluation that he immediately order the physical clearance of this hazard across the entire slope corridor and cease municipal interference.

For complete public transparency, this transcript and supporting evidence—including the raw and annotated exhibits of Litfin's correspondence—are published on the public GitHub audit repository.

Thank you.
